Chapter 1

Todo List

Member HTTP_buildheaders (const HTTP_t *http)

: OOM tests

Member HTTP_remheader (HTTP_t *http, HTTPHeader_t *header)

: make sclist_remrecord return a status (found/notfound) and use it

Chapter 2

Bug List

Member HTTP_remheader (HTTP_t *http, HTTPHeader_t *header)

Header deleted if not found in this HTTP, but it obviously belongs to another HTTP, will be freed, but not removed from his header list SIGSEGV11 to expect at some point

Chapter 3

Class Index

3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

Chapter 4

File Index

4.1 File List

Here is a list of all files with brief descriptions:

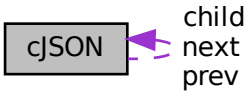
Chapter 5

Class Documentation

5.1 cJSON Struct Reference

`#include <cJSON.h>`

Collaboration diagram for cJSON:



Public Attributes

- struct cJSON * next
- struct cJSON * prev
- struct cJSON * child
- int type
- char * valuestring
- int valueint
- double valuedouble
- char * string

5.1.1 Detailed Description

Definition at line 103 of file cJSON.h.

5.1.2 Member Data Documentation

5.1.2.1 child

```
struct cJSON* cJSON::child
```

Definition at line 108 of file cJSON.h.

5.1.2.2 next

```
struct cJSON* cJSON::next
```

Definition at line 105 of file cJSON.h.

5.1.2.3 prev

```
struct cJSON* cJSON::prev
```

Definition at line 106 of file cJSON.h.

5.1.2.4 string

```
char* cJSON::string
```

Definition at line 121 of file cJSON.h.

5.1.2.5 type

```
int cJSON::type
```

Definition at line 111 of file cJSON.h.

5.1.2.6 valuedouble

```
double cJSON::valuedouble
```

Definition at line 118 of file cJSON.h.

5.1.2.7 valueint

```
int cJSON::valueint
```

Definition at line 116 of file cJSON.h.

5.1.2.8 valuestring

```
char* cJSON::valuestring
```

Definition at line 114 of file cJSON.h.

The documentation for this struct was generated from the following file:

- cJSON.h

5.2 cJSON_Hooks Struct Reference

```
#include <cJSON.h>
```

Public Member Functions

- void *CJSON_CDECL * malloc_fn (size_t sz)
- void (CJSON_CDECL *free_fn)(void *ptr)

5.2.1 Detailed Description

Definition at line 124 of file cJSON.h.

5.2.2 Member Function Documentation

5.2.2.1 malloc_fn()

```
void *CJSON_CDECL * cJSON_Hooks::malloc_fn (
            size_t sz )
```

5.2.2.2 void()

```
cJSON_Hooks::void (
            CJSON_CDECL * free_fn )
```

The documentation for this struct was generated from the following file:

- cJSON.h

5.3 cluster_s Struct Reference

```
#include <cluster.h>
```

Public Attributes

- unsigned short int enabled
- char * host
- char * user
- char * pass
- char * insecure
- char * cacert

5.3.1 Detailed Description

Definition at line 24 of file cluster.h.

5.3.2 Member Data Documentation

5.3.2.1 cacert

```
char* cluster_s::cacert
```

Definition at line 30 of file cluster.h.

5.3.2.2 enabled

```
unsigned short int cluster_s::enabled
```

Definition at line 25 of file cluster.h.

5.3.2.3 host

```
char* cluster_s::host
```

Definition at line 26 of file cluster.h.

5.3.2.4 insecure

```
char* cluster_s::insecure
```

Definition at line 29 of file cluster.h.

5.3.2.5 pass

```
char* cluster_s::pass
```

Definition at line 28 of file cluster.h.

5.3.2.6 user

```
char* cluster_s::user
```

Definition at line 27 of file cluster.h.

The documentation for this struct was generated from the following file:

- cluster.h

5.4 error Struct Reference

Public Attributes

- const unsigned char * json
- size_t position

5.4.1 Detailed Description

Definition at line 88 of file cJSON.c.

5.4.2 Member Data Documentation

5.4.2.1 json

```
const unsigned char* error::json
```

Definition at line 89 of file cJSON.c.

5.4.2.2 position

```
size_t error::position
```

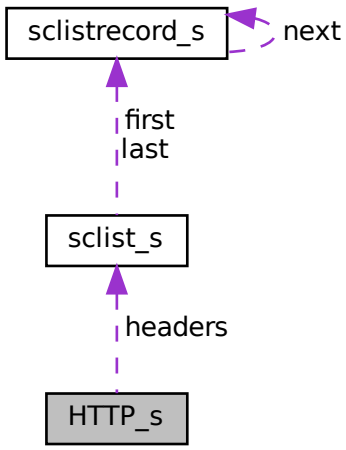
Definition at line 90 of file cJSON.c.

The documentation for this struct was generated from the following file:

- cJSON.c

5.5 HTTP_s Struct Reference

Collaboration diagram for HTTP_s:



Public Attributes

- sclist_t * headers
- char * body

5.5.1 Detailed Description

Definition at line 32 of file libhttp.c.

5.5.2 Member Data Documentation

5.5.2.1 body

```
char* HTTP_s::body
```

Definition at line 34 of file libhttp.c.

5.5.2.2 headers

```
sclist_t* HTTP_s::headers
```

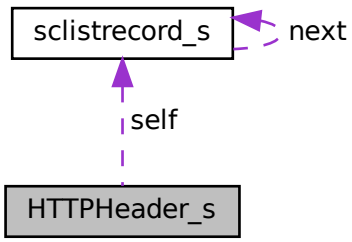
Definition at line 33 of file libhttp.c.

The documentation for this struct was generated from the following file:

- libhttp.c

5.6 HTTPHeader_s Struct Reference

Collaboration diagram for HTTPHeader_s:



Public Attributes

- sclistrecord_t * self
- char * name
- char * value

5.6.1 Detailed Description

Definition at line 37 of file libhttp.c.

5.6.2 Member Data Documentation

5.6.2.1 name

```
char* HTTPHeader_s::name
```

Definition at line 39 of file libhttp.c.

5.6.2.2 self

```
sclistrecord_t* HTTPHeader_s::self
```

Definition at line 38 of file libhttp.c.

5.6.2.3 value

```
char* HTTPHeader_s::value
```

Definition at line 40 of file libhttp.c.

The documentation for this struct was generated from the following file:

- libhttp.c

5.7 internal_hooks Struct Reference

Public Member Functions

- void *CJSON_CDECL * allocate (size_t size)
- void (CJSON_CDECL *deallocate)(void *pointer)
- void *CJSON_CDECL * reallocate (void *pointer, size_t size)

5.7.1 Detailed Description

Definition at line 145 of file cJSON.c.

5.7.2 Member Function Documentation

5.7.2.1 allocate()

```
void *CJSON_CDECL * internal_hooks::allocate (
            size_t size )
```

5.7.2.2 reallocate()

```
void *CJSON_CDECL * internal_hooks::reallocate (
            void * pointer,
            size_t size )
```

5.7.2.3 void()

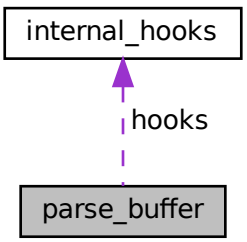
```
internal_hooks::void (
            CJSON_CDECL * deallocate )
```

The documentation for this struct was generated from the following file:

- cJSON.c

5.8 parse_buffer Struct Reference

Collaboration diagram for parse_buffer:



Public Attributes

- const unsigned char * content
- size_t length
- size_t offset
- size_t depth
- internal_hooks hooks

5.8.1 Detailed Description

Definition at line 258 of file cJSON.c.

5.8.2 Member Data Documentation

5.8.2.1 content

```
const unsigned char* parse_buffer::content
```

Definition at line 259 of file cJSON.c.

5.8.2.2 depth

```
size_t parse_buffer::depth
```

Definition at line 262 of file cJSON.c.

5.8.2.3 hooks

```
internal_hooks parse_buffer::hooks
```

Definition at line 263 of file cJSON.c.

5.8.2.4 length

```
size_t parse_buffer::length
```

Definition at line 260 of file cJSON.c.

5.8.2.5 offset

```
size_t parse_buffer::offset
```

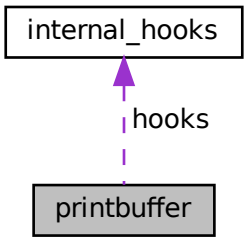
Definition at line 261 of file cJSON.c.

The documentation for this struct was generated from the following file:

- cJSON.c

5.9 printbuffer Struct Reference

Collaboration diagram for printbuffer:



Public Attributes

- unsigned char * buffer
- size_t length
- size_t offset
- size_t depth
- cJSON_bool noalloc
- cJSON_bool format
- internal_hooks hooks

5.9.1 Detailed Description

Definition at line 391 of file cJSON.c.

5.9.2 Member Data Documentation

5.9.2.1 buffer

```
unsigned char* printbuffer::buffer
```

Definition at line 392 of file cJSON.c.

5.9.2.2 depth

```
size_t printbuffer::depth
```

Definition at line 395 of file cJSON.c.

5.9.2.3 format

```
cJSON_bool printbuffer::format
```

Definition at line 397 of file cJSON.c.

5.9.2.4 hooks

```
internal_hooks printbuffer::hooks
```

Definition at line 398 of file cJSON.c.

5.9.2.5 length

```
size_t printbuffer::length
```

Definition at line 393 of file cJSON.c.

5.9.2.6 noalloc

```
cJSON_bool printbuffer::noalloc
```

Definition at line 396 of file cJSON.c.

5.9.2.7 offset

```
size_t printbuffer::offset
```

Definition at line 394 of file cJSON.c.

The documentation for this struct was generated from the following file:

- cJSON.c

5.10 rsclustercon_s Struct Reference

Public Attributes

- char * host
- char * user
- char * pass
- unsigned short int insecure
- char * cacert
- int sock
- SSL_CTX * ctx
- SSL * ssl

5.10.1 Detailed Description

Definition at line 38 of file clustercon.c.

5.10.2 Member Data Documentation

5.10.2.1 cacert

```
char* rsclustercon_s::cacert
```

Definition at line 43 of file clustercon.c.

5.10.2.2 ctx

```
SSL_CTX* rsclustercon_s::ctx
```

Definition at line 45 of file clustercon.c.

5.10.2.3 host

```
char* rsclustercon_s::host
```

Definition at line 39 of file clustercon.c.

5.10.2.4 insecure

```
unsigned short int rsclustercon_s::insecure
```

Definition at line 42 of file clustercon.c.

5.10.2.5 pass

```
char* rsclustercon_s::pass
```

Definition at line 41 of file clustercon.c.

5.10.2.6 sock

```
int rsclustercon_s::sock
```

Definition at line 44 of file clustercon.c.

5.10.2.7 ssl

```
SSL* rsclustercon_s::ssl
```

Definition at line 46 of file clustercon.c.

5.10.2.8 user

```
char* rsclustercon_s::user
```

Definition at line 40 of file clustercon.c.

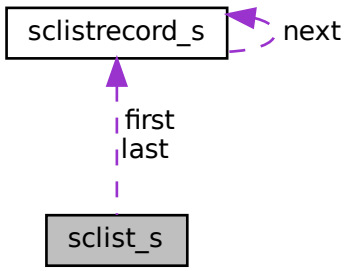
The documentation for this struct was generated from the following file:

- clustercon.c

5.11 sclist_s Struct Reference

Opaque sclist structure.

Collaboration diagram for sclist_s:



Public Attributes

- sclistrecord_t * first
  Pointer to the first record.
- sclistrecord_t * last
  Pointer to the last record.

5.11.1 Detailed Description

Opaque sclist structure.

Definition at line 38 of file sclist.c.

5.11.2 Member Data Documentation

5.11.2.1 first

```
sclistrecord_t* sclist_s::first
```

Pointer to the first record.

Definition at line 39 of file sclist.c.

5.11.2.2 last

```
sclistrecord_t* sclist_s::last
```

Pointer to the last record.

Definition at line 40 of file sclist.c.

The documentation for this struct was generated from the following file:

- sclist.c

5.12 sclistrecord_s Struct Reference

Private list record structure.

Collaboration diagram for sclistrecord_s:

Public Attributes

- void * value
  Pointer to value.
- struct sclistrecord_s * next
  Next record in the list.

5.12.1 Detailed Description

Private list record structure.

Definition at line 31 of file sclist.c.

5.12.2 Member Data Documentation

5.12.2.1 next

```
struct sclistrecord_s* sclistrecord_s::next
```

Next record in the list.

Definition at line 33 of file sclist.c.

5.12.2.2 value

```
void* sclistrecord_s::value
```

Pointer to value.

Definition at line 32 of file sclist.c.

The documentation for this struct was generated from the following file:

- sclist.c

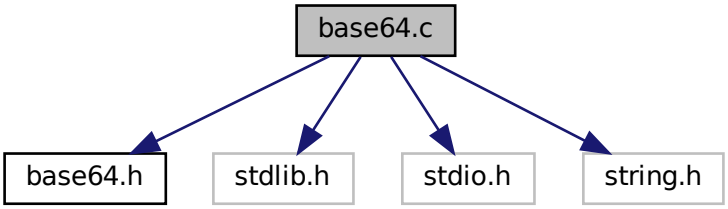
6.3 base64.c File Reference

Simple Base64 encoding and decoding functions.

```
#include "base64.h"
#include <stdlib.h>
#include <stdio.h>
#include <string.h>
```

Include dependency graph for base64.c:



Functions

- char * base64_encode (char *plain)

  Encode a zero terminated C string in Base64.
- char * base64_decode (char *cipher)

  Decode a zero terminated C Base64 encoded string.

6.3.1 Detailed Description

Simple Base64 encoding and decoding functions.

Copied and adapted from https://github.com/elzoughby/Base64

Author

François Cerbelle (Fanfan), francois@cerbelle.net

Definition in file base64.c.

6.3.2 Function Documentation

6.3.2.1 base64_decode()

```
char * base64_decode (
            char * cipher )
```

Decode a zero terminated C Base64 encoded string.

Parameters

cipher	Zero Terminated C Base64 encoded string

Returns

Decoded zero terminated C string

Return values

Pointer	to a zero terminated C string
NULL	in case of out of memory

cipher can not be NULL. the returned value is mallocated and needs to be freed.

Definition at line 77 of file base64.c.

6.3.2.2 base64_encode()

```
char * base64_encode (
            char * plain )
```

Encode a zero terminated C string in Base64.

Parameters

plain	Zero Terminated C string

Returns

Encoded zero terminated C string

Return values

Pointer	to a zero terminated C string
NULL	in case of out of memory

plain can not be NULL. the returned value is mallocated and needs to be freed.

Definition at line 39 of file base64.c.

Here is the caller graph for this function:

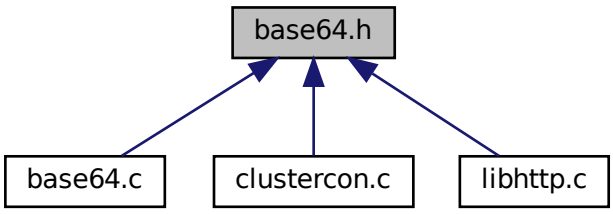
6.5 base64.h File Reference

Simple Base64 encoding and decoding functions.

This graph shows which files directly or indirectly include this file:



Functions

- char * base64_encode (char *plain)

  Encode a zero terminated C string in Base64.
- char * base64_decode (char *cipher)

  Decode a zero terminated C Base64 encoded string.

6.5.1 Detailed Description

Simple Base64 encoding and decoding functions.

Copied and adapted from https://github.com/elzoughby/Base64

Author

François Cerbelle (Fanfan), francois@cerbelle.net

Definition in file base64.h.

6.5.2 Function Documentation

6.5.2.1 base64_decode()

```
char * base64_decode (
            char * cipher )
```

Decode a zero terminated C Base64 encoded string.

Parameters

cipher	Zero Terminated C Base64 encoded string

Returns

Decoded zero terminated C string

Return values

Pointer	to a zero terminated C string
NULL	in case of out of memory

cipher can not be NULL. the returned value is mallocated and needs to be freed.

Definition at line 77 of file base64.c.

6.5.2.2 base64_encode()

```
char * base64_encode (
            char * plain )
```

Encode a zero terminated C string in Base64.

Parameters

plain	Zero Terminated C string

Returns

Encoded zero terminated C string

Return values

Pointer	to a zero terminated C string
NULL	in case of out of memory

plain can not be NULL. the returned value is mallocated and needs to be freed.

Definition at line 39 of file base64.c.

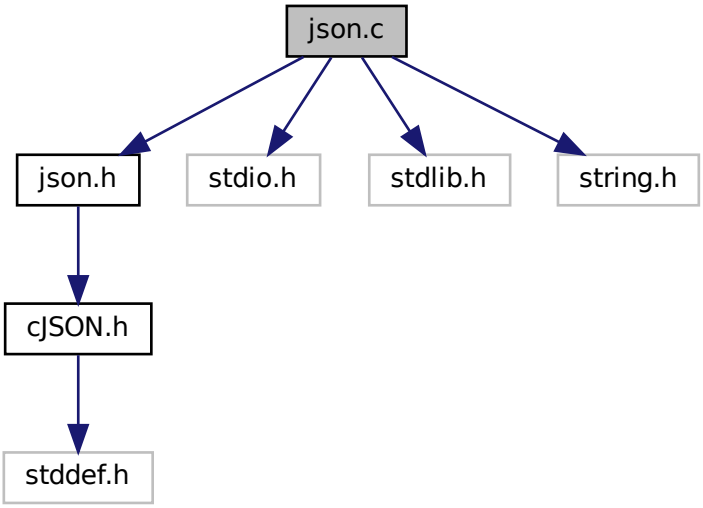
6.25 json.c File Reference

Wrapper around cJSON library with helpers.

```
#include "json.h"
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
```

Include dependency graph for json.c:



Functions

- char * json2text (cJSON *value_json)
  Convert a cJSON object in a C String.

6.25.1 Detailed Description

Wrapper around cJSON library with helpers.

This library is only a simple wrapper around the cJSON library, providing helper functions.

Author

François Cerbelle (Fanfan), francois@cerbelle.net

Definition in file json.c.

6.25.2 Function Documentation

6.25.2.1 json2text()

```
char * json2text (
            cJSON * value_json )
```

Convert a cJSON object in a C String.

Parameters

value_json	the cJSON value to convert

Returns

The C string conversion dynamically allocated.

Return values

NULL	if there was a problem, such as an Out Of Memory
Pointer	to a zero terminated C string.

It converts NULL values, String values, Integer values, Boolean values in C strings. If the value is an array, it is fully pretty printed. If the JSON value is nothing in this list, the function returns the "Invalid data" string.

The returned strings are allocated using malloc on the heap and should be freed by the calling application.

Definition at line 31 of file json.c.

The C string conversion dynamically allocated.

Return values

NULL	if there was a problem, such as an Out Of Memory
Pointer	to a zero terminated C string.

It converts NULL values, String values, Integer values, Boolean values in C strings. If the value is an array, it is fully pretty printed. If the JSON value is nothing in this list, the function returns the "Invalid data" string.

The returned strings are allocated using malloc on the heap and should be freed by the calling application.

6.29.1 Detailed Description

HTTP parsing and building library.

Author

François Cerbelle (Fanfan), francois@cerbelle.net

Definition in file libhttp.c.

6.29.2 Typedef Documentation

6.29.2.1 HTTP_t

```
typedef struct HTTP_s HTTP_t
```

6.29.2.2 HTTPHeader_t

```
typedef struct HTTPHeader_s HTTPHeader_t
```

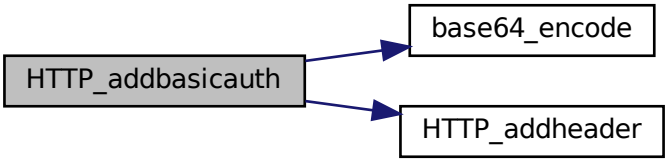
6.29.3 Function Documentation

6.29.3.1 HTTP_addbasicauth()

```
HTTPHeader_t * HTTP_addbasicauth (
            HTTP_t * http,
            const char * login,
            const char * pass )
```

Definition at line 235 of file libhttp.c.

Here is the call graph for this function:



6.29.3.2 HTTP_addheader()

```
HTTPHeader_t * HTTP_addheader (
            HTTP_t * http,
            const char * name,
            const char * value )
```

Definition at line 208 of file libhttp.c.

Here is the caller graph for this function:

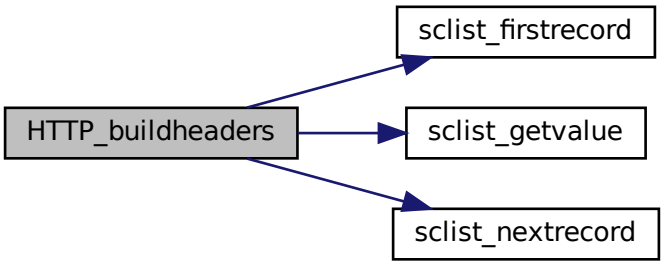
6.29.3.3 HTTP_buildheaders()

```
char * HTTP_buildheaders (
            const HTTP_t * http )
```

Todo : OOM tests

Definition at line 377 of file libhttp.c.

Here is the call graph for this function:



6.29.3.4 HTTP_buildrequest()

```
char * HTTP_buildrequest (
            const HTTPMethod_t method,
            const char * uri,
            const HTTPVersion_t version )
```

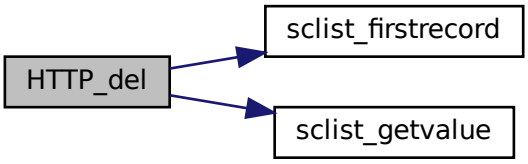
Definition at line 416 of file libhttp.c.

6.29.3.5 HTTP_del()

```
void HTTP_del (
            HTTP_t * http )
```

Definition at line 157 of file libhttp.c.

Here is the call graph for this function:

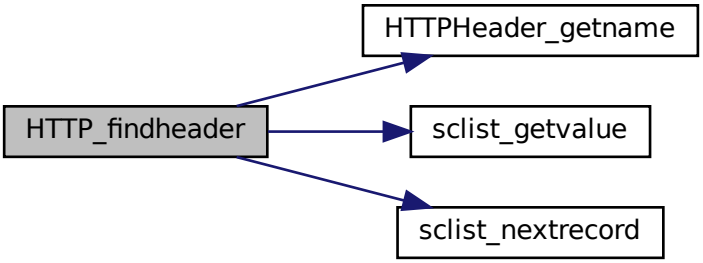


6.29.3.6 HTTP_findheader()

```
HTTPHeader_t * HTTP_findheader (
            const HTTPHeader_t * start,
            const char * name )
```

Definition at line 304 of file libhttp.c.

Here is the call graph for this function:

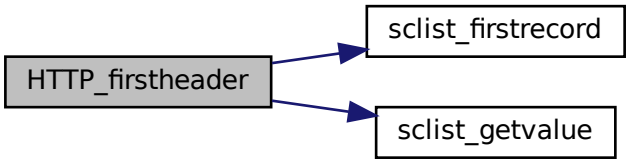


6.29.3.7 HTTP_firstheader()

```
HTTPHeader_t * HTTP_firstheader (
            const HTTP_t * http )
```

Definition at line 275 of file libhttp.c.

Here is the call graph for this function:



6.29.3.8 HTTP_getbody()

```
char * HTTP_getbody (
            HTTP_t * http )
```

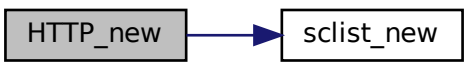
Definition at line 200 of file libhttp.c.

6.29.3.9 HTTP_new()

```
HTTP_t * HTTP_new ( )
```

Definition at line 133 of file libhttp.c.

Here is the call graph for this function:

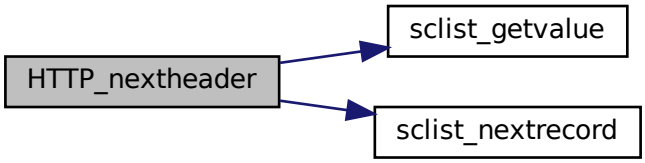


6.29.3.10 HTTP_nextheader()

```
HTTPHeader_t * HTTP_nextheader (
            const HTTPHeader_t * header )
```

Definition at line 287 of file libhttp.c.

Here is the call graph for this function:



6.29.3.11 HTTP_remheader()

```
HTTP_t * HTTP_remheader (
            HTTP_t * http,
            HTTPHeader_t * header )
```

Todo : make sclist_remrecord return a status (found/notfound) and use it

Bug Header deleted if not found in this HTTP, but it obviously belongs to another HTTP, will be freed, but not removed from his header list SIGSEGV11 to expect at some point

Definition at line 335 of file libhttp.c.

Here is the call graph for this function:

6.29.3.12 HTTP_setbody()

```
HTTP_t * HTTP_setbody (
            HTTP_t * http,
            const char * body )
```

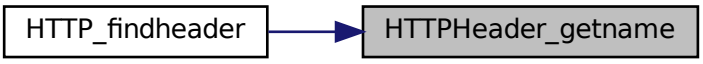
Definition at line 182 of file libhttp.c.

6.29.3.13 HTTPHeader_getname()

```
char * HTTPHeader_getname (
            HTTPHeader_t * header )
```

Definition at line 65 of file libhttp.c.

Here is the caller graph for this function:



6.29.3.14 HTTPHeader_getvalue()

```
char * HTTPHeader_getvalue (
            HTTPHeader_t * header )
```

Definition at line 90 of file libhttp.c.

6.29.3.15 HTTPHeader_setname()

```
HTTPHeader_t * HTTPHeader_setname (
            HTTPHeader_t * header,
            const char * name )
```

Definition at line 43 of file libhttp.c.

6.29.3.16 HTTPHeader_setvalue()

```
HTTPHeader_t * HTTPHeader_setvalue (
            HTTPHeader_t * header,
            const char * value )
```

Definition at line 73 of file libhttp.c.

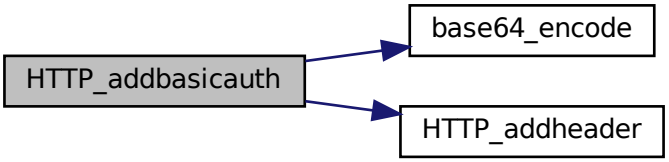
6.31.4 Function Documentation

6.31.4.1 HTTP_addbasicauth()

```
HTTPHeader_t * HTTP_addbasicauth (
            HTTP_t * http,
            const char * login,
            const char * pass )
```

Definition at line 235 of file libhttp.c.

Here is the call graph for this function:



6.31.4.2 HTTP_addheader()

```
HTTPHeader_t * HTTP_addheader (
            HTTP_t * http,
            const char * name,
            const char * value )
```

Definition at line 208 of file libhttp.c.

Here is the caller graph for this function:

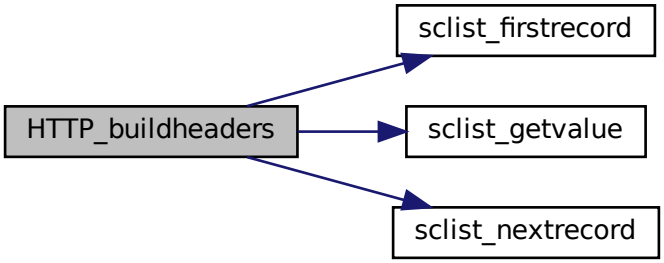
6.31.4.3 HTTP_buildheaders()

```
char * HTTP_buildheaders (
            const HTTP_t * http )
```

Todo : OOM tests

Definition at line 377 of file libhttp.c.

Here is the call graph for this function:



6.31.4.4 HTTP_buildreply()

```
char * HTTP_buildreply (
            const HTTP_t * http,
            const HTTPVersion_t,
            const HTTPStatus_t )
```

6.31.4.5 HTTP_buildrequest()

```
char * HTTP_buildrequest (
            const HTTPMethod_t method,
            const char * uri,
            const HTTPVersion_t version )
```

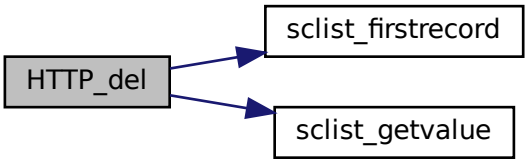
Definition at line 416 of file libhttp.c.

6.31.4.6 HTTP_del()

```
void HTTP_del (
            HTTP_t * http )
```

Definition at line 157 of file libhttp.c.

Here is the call graph for this function:

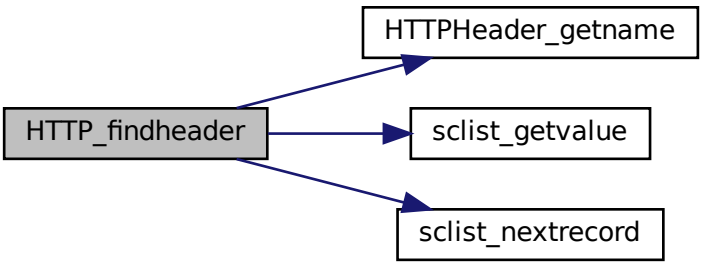


6.31.4.7 HTTP_findheader()

```
HTTPHeader_t * HTTP_findheader (
            const HTTPHeader_t * start,
            const char * name )
```

Definition at line 304 of file libhttp.c.

Here is the call graph for this function:

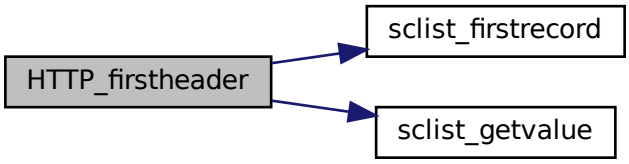


6.31.4.8 HTTP_firstheader()

```
HTTPHeader_t * HTTP_firstheader (
            const HTTP_t * http )
```

Definition at line 275 of file libhttp.c.

Here is the call graph for this function:



6.31.4.9 HTTP_getbody()

```
char * HTTP_getbody (
            HTTP_t * http )
```

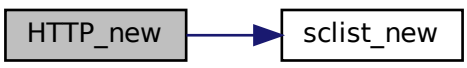
Definition at line 200 of file libhttp.c.

6.31.4.10 HTTP_new()

```
HTTP_t * HTTP_new ( )
```

Definition at line 133 of file libhttp.c.

Here is the call graph for this function:

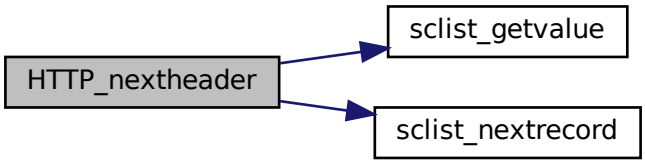


6.31.4.11 HTTP_nextheader()

```
HTTPHeader_t * HTTP_nextheader (
            const HTTPHeader_t * header )
```

Definition at line 287 of file libhttp.c.

Here is the call graph for this function:



6.31.4.12 HTTP_parsereply()

```
void HTTP_parsereply (
            const char * reply,
            HTTP_t ** http,
            HTTPVersion_t * ,
            HTTPStatus_t *  )
```

6.31.4.13 HTTP_parserequest()

```
void HTTP_parserequest (
            const char * request,
            HTTP_t ** http,
            HTTPMethod_t method,
            char * uri,
            HTTPVersion_t version )
```

6.31.4.14 HTTP_remheader()

```
HTTP_t * HTTP_remheader (
            HTTP_t * http,
            HTTPHeader_t * header )
```

Todo : make sclist_remrecord return a status (found/notfound) and use it

Bug Header deleted if not found in this HTTP, but it obviously belongs to another HTTP, will be freed, but not removed from his header list SIGSEGV11 to expect at some point

Definition at line 335 of file libhttp.c.

Here is the call graph for this function:

6.31.4.15 HTTP_setbody()

```
HTTP_t * HTTP_setbody (
            HTTP_t * http,
            const char * body )
```

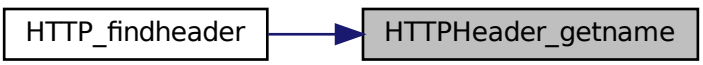
Definition at line 182 of file libhttp.c.

6.31.4.16 HTTPHeader_getname()

```
char * HTTPHeader_getname (
            HTTPHeader_t * header )
```

Definition at line 65 of file libhttp.c.

Here is the caller graph for this function:



6.31.4.17 HTTPHeader_getvalue()

```
char * HTTPHeader_getvalue (
            HTTPHeader_t * header )
```

Definition at line 90 of file libhttp.c.

6.31.4.18 HTTPHeader_setname()

```
HTTPHeader_t * HTTPHeader_setname (
            HTTPHeader_t * header,
            const char * name )
```

Definition at line 43 of file libhttp.c.

6.31.4.19 HTTPHeader_setvalue()

```
HTTPHeader_t * HTTPHeader_setvalue (
            HTTPHeader_t * header,
            const char * value )
```

Definition at line 73 of file libhttp.c.

- tOptProc optionUnstackArg
- tOptProc optionVendorOption
- tOptions rsstatsOptions

  The option definitions for rsstats.

6.49.1 Macro Definition Documentation

6.49.1.1 CLUSTERS_DESC

```
#define CLUSTERS_DESC (rsstats_opt_strs+1020)
```

clusters option description:

Descriptive text for the clusters option

Definition at line 184 of file rsstats-opts.c.

6.49.1.2 CLUSTERS_DFT_ARG

```
#define CLUSTERS_DFT_ARG (rsstats_opt_strs+1099)
```

The compiled in default value for the clusters option argument.

Definition at line 190 of file rsstats-opts.c.

6.49.1.3 CLUSTERS_FLAGS

```
#define CLUSTERS_FLAGS
```

Value:

```
(OPTST_DISABLED \
| OPTST_SET_ARGTYPE(OPARG_TYPE_STRING))
```

Compiled in flag settings for the clusters option.

Definition at line 192 of file rsstats-opts.c.

6.49.1.4 CLUSTERS_NAME

```
#define CLUSTERS_NAME (rsstats_opt_strs+1081)
```

Upper-cased name for the clusters option.

Definition at line 186 of file rsstats-opts.c.

6.49.1.5 CLUSTERS_name

```
#define CLUSTERS_name (rsstats_opt_strs+1090)
```

Name string for the clusters option.

Definition at line 188 of file rsstats-opts.c.

6.49.1.6 HELP_DESC

```
#define HELP_DESC (rsstats_opt_strs+1178)
```

Definition at line 214 of file rsstats-opts.c.

6.49.1.7 HELP_name

```
#define HELP_name (rsstats_opt_strs+1222)
```

Definition at line 215 of file rsstats-opts.c.

6.49.1.8 INPUT_DESC

```
#define INPUT_DESC (rsstats_opt_strs+861)
```

input option description:

Descriptive text for the input option

Definition at line 154 of file rsstats-opts.c.

6.49.1.9 INPUT_DFT_ARG

```
#define INPUT_DFT_ARG (rsstats_opt_strs+914)
```

The compiled in default value for the input option argument.

Definition at line 160 of file rsstats-opts.c.

6.49.1.10 INPUT_FLAGS

```
#define INPUT_FLAGS
```

Value:

```
        (OPTST_DISABLED \
        | OPTST_SET_ARGTYPE(OPARG_TYPE_FILE))
```

Compiled in flag settings for the input option.

Definition at line 162 of file rsstats-opts.c.

6.49.1.11 INPUT_NAME

```
#define INPUT_NAME (rsstats_opt_strs+902)
```

Upper-cased name for the input option.

Definition at line 156 of file rsstats-opts.c.

6.49.1.12 INPUT_name

```
#define INPUT_name (rsstats_opt_strs+908)
```

Name string for the input option.

Definition at line 158 of file rsstats-opts.c.

6.49.1.13 LOAD_OPTS_DESC

```
#define LOAD_OPTS_DESC (rsstats_opt_strs+1375)
```

Definition at line 235 of file rsstats-opts.c.

6.49.1.14 LOAD_OPTS_NAME

```
#define LOAD_OPTS_NAME (rsstats_opt_strs+1407)
```

Definition at line 236 of file rsstats-opts.c.

6.49.1.15 LOAD_OPTS_name

```
#define LOAD_OPTS_name (NO_LOAD_OPTS_name + 3)
```

Definition at line 239 of file rsstats-opts.c.

6.49.1.16 LOAD_OPTS_pfx

```
#define LOAD_OPTS_pfx (rsstats_opt_strs+1430)
```

Definition at line 238 of file rsstats-opts.c.

6.49.1.17 MORE_HELP_DESC

```
#define MORE_HELP_DESC HELP_DESC
```

Definition at line 221 of file rsstats-opts.c.

6.49.1.18 MORE_HELP_FLAGS

```
#define MORE_HELP_FLAGS (OPTST_OMITTED | OPTST_NO_INIT)
```

Definition at line 223 of file rsstats-opts.c.

6.49.1.19 MORE_HELP_name

```
#define MORE_HELP_name HELP_name
```

Definition at line 222 of file rsstats-opts.c.

6.49.1.20 NO_LOAD_OPTS_name

```
#define NO_LOAD_OPTS_name (rsstats_opt_strs+1417)
```

Definition at line 237 of file rsstats-opts.c.

6.49.1.21 NULL

```
#define NULL 0
```

Definition at line 64 of file rsstats-opts.c.

6.49.1.22 O_CLOEXEC

```
#define O_CLOEXEC 0
```

6.49.1.23 OPTION_CODE_COMPILE

```
#define OPTION_CODE_COMPILE 1
```

Definition at line 42 of file rsstats-opts.c.

6.49.1.24 OPTPROC_BASE

```
#define OPTPROC_BASE OPTPROC_NONE
```

Definition at line 398 of file rsstats-opts.c.

6.49.1.25 OUTPUT_DESC

```
#define OUTPUT_DESC (rsstats_opt_strs+929)
```

output option description:

Descriptive text for the output option

Definition at line 169 of file rsstats-opts.c.

6.49.1.26 OUTPUT_DFT_ARG

```
#define OUTPUT_DFT_ARG (rsstats_opt_strs+1008)
```

The compiled in default value for the output option argument.

Definition at line 175 of file rsstats-opts.c.

6.49.1.27 OUTPUT_FLAGS

```
#define OUTPUT_FLAGS
```

Value:

```
(OPTST_DISABLED \
| OPTST_SET_ARGTYPE(OPARG_TYPE_FILE))
```

Compiled in flag settings for the output option.

Definition at line 177 of file rsstats-opts.c.

6.49.1.28 OUTPUT_NAME

```
#define OUTPUT_NAME (rsstats_opt_strs+994)
```

Upper-cased name for the output option.

Definition at line 171 of file rsstats-opts.c.

6.49.1.29 OUTPUT_name

```
#define OUTPUT_name (rsstats_opt_strs+1001)
```

Name string for the output option.

Definition at line 173 of file rsstats-opts.c.

6.49.1.30 PKGDATADIR

```
#define PKGDATADIR ""
```

The directory containing the data associated with rsstats.

Definition at line 503 of file rsstats-opts.c.

6.49.1.31 REPORTS_DESC

```
#define REPORTS_DESC (rsstats_opt_strs+1103)
```

reports option description:

Descriptive text for the reports option

Definition at line 199 of file rsstats-opts.c.

6.49.1.32 REPORTS_DFT_ARG

```
#define REPORTS_DFT_ARG (NULL)
```

The compiled in default value for the reports option argument.

Definition at line 205 of file rsstats-opts.c.

6.49.1.33 REPORTS_FLAGS

```
#define REPORTS_FLAGS
```

Value:

```
        (OPTST_DISABLED \
        | OPTST_SET_ARGTYPE(OPARG_TYPE_MEMBERSHIP))
```

Compiled in flag settings for the reports option.

Definition at line 208 of file rsstats-opts.c.

6.49.1.34 REPORTS_NAME

```
#define REPORTS_NAME (rsstats_opt_strs+1162)
```

Upper-cased name for the reports option.

Definition at line 201 of file rsstats-opts.c.

6.49.1.35 REPORTS_name

```
#define REPORTS_name (rsstats_opt_strs+1170)
```

Name string for the reports option.

Definition at line 203 of file rsstats-opts.c.

6.49.1.36 ReportsCookieBits

```
#define ReportsCookieBits VOIDP(REPORTS_BDBS|REPORTS_CLUSTER)
```

Definition at line 206 of file rsstats-opts.c.

6.49.1.37 rsstats_full_usage

```
#define rsstats_full_usage (NULL)
```

Definition at line 402 of file rsstats-opts.c.

6.49.1.38 rsstats_packager_info

```
#define rsstats_packager_info NULL
```

Information about the person or institution that packaged rsstats for the current distribution.

Definition at line 511 of file rsstats-opts.c.

6.49.1.39 rsstats_short_usage

```
#define rsstats_short_usage (NULL)
```

Definition at line 403 of file rsstats-opts.c.

6.49.1.40 SAVE_OPTS_DESC

```
#define SAVE_OPTS_DESC (rsstats_opt_strs+1326)
```

Definition at line 233 of file rsstats-opts.c.

6.49.1.41 SAVE_OPTS_name

```
#define SAVE_OPTS_name (rsstats_opt_strs+1365)
```

Definition at line 234 of file rsstats-opts.c.

6.49.1.42 translate_option_strings

```
#define translate_option_strings NULL
```

Definition at line 399 of file rsstats-opts.c.

6.49.1.43 VER_DESC

```
#define VER_DESC (rsstats_opt_strs+1282)
```

Definition at line 231 of file rsstats-opts.c.

6.49.1.44 VER_FLAGS

```
#define VER_FLAGS
```

Value:

```
(OPTST_SET_ARGTYPE(OPARG_TYPE_STRING) | \
OPTST_ARG_OPTIONAL | OPTST_IMM | OPTST_NO_INIT)
```

Definition at line 228 of file rsstats-opts.c.

6.49.1.45 VER_name

```
#define VER_name (rsstats_opt_strs+1318)
```

Definition at line 232 of file rsstats-opts.c.

6.49.1.46 VER_PROC

```
#define VER_PROC optionPrintVersion
```

Definition at line 250 of file rsstats-opts.c.

6.49.1.47 zBugsAddr

```
#define zBugsAddr (rsstats_opt_strs+1581)
```

The rsstats program bug email address.

Definition at line 385 of file rsstats-opts.c.

6.49.1.48 zCopyright

```
#define zCopyright (rsstats_opt_strs+0)
```

Definition at line 59 of file rsstats-opts.c.

6.49.1.49 zDetail

```
#define zDetail (rsstats_opt_strs+1995)
```

Extra detail explaining what rsstats does.

Definition at line 389 of file rsstats-opts.c.

6.49.1.50 zExplain

```
#define zExplain (rsstats_opt_strs+1603)
```

Clarification/explanation of what rsstats does.

Definition at line 387 of file rsstats-opts.c.

6.49.1.51 zFullVersion

```
#define zFullVersion (rsstats_opt_strs+3361)
```

The full version string for rsstats.

Definition at line 391 of file rsstats-opts.c.

6.49.1.52 zLicenseDescrip

```
#define zLicenseDescrip (rsstats_opt_strs+258)
```

Definition at line 60 of file rsstats-opts.c.

6.49.1.53 zPROGNAME

```
#define zPROGNAME (rsstats_opt_strs+1433)
```

Reference to the upper cased version of rsstats.

Definition at line 375 of file rsstats-opts.c.

6.49.1.54 zRcName

```
#define zRcName (rsstats_opt_strs+1570)
```

rsstats configuration file name.

Definition at line 379 of file rsstats-opts.c.

6.49.1.55 zUsageTitle

```
#define zUsageTitle (rsstats_opt_strs+1441)
```

Reference to the title line for rsstats usage.

Definition at line 377 of file rsstats-opts.c.

6.49.2 Variable Documentation

6.49.2.1 option_usage_fp

```
FILE* option_usage_fp  [extern]
```

6.49.2.2 optionBooleanVal

```
tOptProc optionBooleanVal  [extern]
```

Declare option callback procedures.

6.49.2.3 optionNestedVal

```
tOptProc optionNestedVal
```

Definition at line 244 of file rsstats-opts.c.

6.49.2.4 optionNumericVal

```
tOptProc optionNumericVal
```

Definition at line 244 of file rsstats-opts.c.

6.49.2.5 optionPagedUsage

```
tOptProc optionPagedUsage
```

Definition at line 245 of file rsstats-opts.c.

6.49.2.6 optionPrintVersion

```
tOptProc optionPrintVersion
```

Definition at line 245 of file rsstats-opts.c.

6.49.2.7 optionResetOpt

```
tOptProc optionResetOpt
```

Definition at line 245 of file rsstats-opts.c.

6.49.2.8 optionStackArg

```
tOptProc optionStackArg
```

Definition at line 246 of file rsstats-opts.c.

6.49.2.9 optionTimeDate

```
tOptProc optionTimeDate
```

Definition at line 246 of file rsstats-opts.c.

6.49.2.10 optionTimeVal

```
tOptProc optionTimeVal
```

Definition at line 246 of file rsstats-opts.c.

6.49.2.11 optionUnstackArg

```
tOptProc optionUnstackArg
```

Definition at line 247 of file rsstats-opts.c.

6.49.2.12 optionVendorOption

```
tOptProc optionVendorOption
```

Definition at line 247 of file rsstats-opts.c.

6.49.2.13 rsstatsOptions

```
tOptions rsstatsOptions
```

The option definitions for rsstats.

The one structure that binds them all.

Definition at line 533 of file rsstats-opts.c.

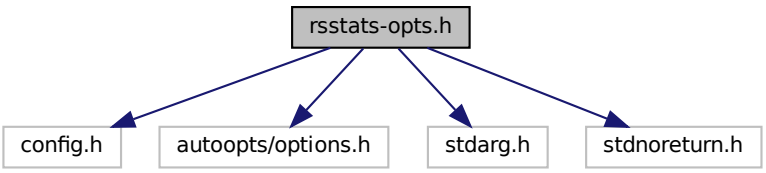
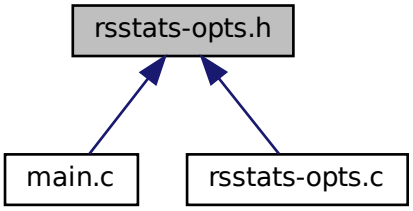
Include dependency graph for rsstats-opts.h:



This graph shows which files directly or indirectly include this file:



Macros

- #define AO_TEMPLATE_VERSION 172033

  This file contains the programmatic interface to the Automated Options generated for the rsstats program.
- #define NOT_REACHED

- #define OPTION_CT 9

  count of all options for rsstats
- #define RSSTATS_VERSION "0.0.1"

  rsstats version
- #define RSSTATS_FULL_VERSION "rsstats 0.0.1"

  Full rsstats version text.
- #define DESC(n) (rsstatsOptions.pOptDesc[INDEX_OPT_## n])

  Interface defines for all options.
- #define HAVE_OPT(n) (! UNUSED_OPT(& DESC(n)))

  'true' if an option has been specified in any way
- #define OPT_ARG(n) (DESC(n).optArg.argString)

  The string argument to an option.
- #define STATE_OPT(n) (DESC(n).fOptState & OPTST_SET_MASK)

  Mask the option state revealing how an option was specified.
- #define COUNT_OPT(n) (DESC(n).optOccCt)

  Count of option's occurrances on the command line.
- #define ISSEL_OPT(n) (SELECTED_OPT(&DESC(n)))

  mask of OPTST_SET and OPTST_DEFINED.
- #define ISUNUSED_OPT(n) (UNUSED_OPT(& DESC(n)))

  'true' if HAVE_OPT would yield 'false'.
- #define ENABLED_OPT(n) (! DISABLED_OPT(& DESC(n)))

  'true' if OPTST_DISABLED bit not set.
- #define STACKCT_OPT(n) (((tArgList*)(DESC(n).optCookie))->useCt)

  number of stacked option arguments.
- #define STACKLST_OPT(n) (((tArgList*)(DESC(n).optCookie))->apzArgs)

  stacked argument vector.
- #define CLEAR_OPT(n)

  Reset an option.

Enumerations

- tOptions rsstatsOptions

  The option definitions for rsstats.

6.51.1 Macro Definition Documentation

6.51.1.1 _

```
#define _(
              _s ) _s
```

Definition at line 230 of file rsstats-opts.h.

6.51.1.2 AO_TEMPLATE_VERSION

```
#define AO_TEMPLATE_VERSION 172033
```

This file contains the programmatic interface to the Automated Options generated for the rsstats program.

These macros are documented in the AutoGen info file in the "AutoOpts" chapter. Please refer to that doc for usage help. Ensure that the library used for compiling this generated header is at least as new as the version current when the header template was released (not counting patch version increments). Also ensure that the oldest tolerable version is at least as old as what was current when the header template was released.

Definition at line 60 of file rsstats-opts.h.

6.51.1.3 CLEAR_OPT

```
#define CLEAR_OPT(
                n )
```

Value:

```
                STMTS( \
                DESC(n).fOptState &= OPTST_PERSISTENT_MASK;   \
                if ((DESC(n).fOptState & OPTST_INITENABLED) == 0) \
                    DESC(n).fOptState |= OPTST_DISABLED; \
                DESC(n).optCookie = NULL )
```

Reset an option.

Definition at line 124 of file rsstats-opts.h.

6.51.1.4 COUNT_OPT

```
#define COUNT_OPT(
                n ) (DESC(n).optOccCt)
```

Count of option's occurrances *on the command line*.

Definition at line 110 of file rsstats-opts.h.

6.51.1.5 DESC

```
#define DESC(
                n ) (rsstatsOptions.pOptDesc[INDEX_OPT_## n])
```

Interface defines for all options.

Replace "n" with the UPPER_CASED option name (as in the teOptIndex enumeration above). e.↩
g. HAVE_OPT(INPUT)

Definition at line 99 of file rsstats-opts.h.

6.51.1.6 ENABLED_OPT

```
#define ENABLED_OPT(
                n ) (!  DISABLED_OPT(& DESC(n)))
```

'true' if OPTST_DISABLED bit not set.

Definition at line 116 of file rsstats-opts.h.

6.51.1.7 ERRSKIP_OPTERR

```
#define ERRSKIP_OPTERR STMTS(rsstatsOptions.fOptSet &= ~OPTPROC_ERRSTOP)
```

Definition at line 172 of file rsstats-opts.h.

6.51.1.8 ERRSTOP_OPTERR

```
#define ERRSTOP_OPTERR STMTS(rsstatsOptions.fOptSet |= OPTPROC_ERRSTOP)
```

Definition at line 173 of file rsstats-opts.h.

6.51.1.9 HAVE_OPT

```
#define HAVE_OPT(
              n ) (!  UNUSED_OPT(& DESC(n)))
```

'true' if an option has been specified in any way

Definition at line 101 of file rsstats-opts.h.

6.51.1.10 ISSEL_OPT

```
#define ISSEL_OPT(
              n ) (SELECTED_OPT(&DESC(n)))
```

mask of *OPTST_SET* and *OPTST_DEFINED*.

Definition at line 112 of file rsstats-opts.h.

6.51.1.11 ISUNUSED_OPT

```
#define ISUNUSED_OPT(
              n ) (UNUSED_OPT(& DESC(n)))
```

'true' if *HAVE_OPT* would yield 'false'.

Definition at line 114 of file rsstats-opts.h.

6.51.1.12 NOT_REACHED

```
#define NOT_REACHED
```

Definition at line 70 of file rsstats-opts.h.

6.51.1.13 OPT_ARG

```
#define OPT_ARG(
              n ) (DESC(n).optArg.argString)
```

The string argument to an option.

The argument type must be "string".

Definition at line 103 of file rsstats-opts.h.

6.51.1.14 OPT_MEMLST_REPORTS

```
#define OPT_MEMLST_REPORTS optionMemberList(&DESC(REPORTS))
```

Definition at line 154 of file rsstats-opts.h.

6.51.1.15 OPT_NO_XLAT_CFG_NAMES

```
#define OPT_NO_XLAT_CFG_NAMES
```

Definition at line 223 of file rsstats-opts.h.

6.51.1.16 OPT_NO_XLAT_OPT_NAMES

```
#define OPT_NO_XLAT_OPT_NAMES
```

Definition at line 224 of file rsstats-opts.h.

6.51.1.17 OPT_VALUE_REPORTS

```
#define OPT_VALUE_REPORTS ((uintptr_t)DESC(REPORTS).optCookie)
```

Definition at line 153 of file rsstats-opts.h.

6.51.1.18 OPT_XLAT_CFG_NAMES

```
#define OPT_XLAT_CFG_NAMES
```

Definition at line 226 of file rsstats-opts.h.

6.51.1.19 OPT_XLAT_OPT_NAMES

```
#define OPT_XLAT_OPT_NAMES
```

Definition at line 227 of file rsstats-opts.h.

6.51.1.20 OPTION_CT

```
#define OPTION_CT 9
```

count of all options for rsstats

Definition at line 88 of file rsstats-opts.h.

6.51.1.21 REPORTS_BDBS

```
#define REPORTS_BDBS 0x2UL
```

Definition at line 150 of file rsstats-opts.h.

6.51.1.22 REPORTS_CLUSTER

```
#define REPORTS_CLUSTER 0x4UL
```

Definition at line 151 of file rsstats-opts.h.

6.51.1.23 REPORTS_MEMBERSHIP_MASK

```
#define REPORTS_MEMBERSHIP_MASK 0x7UL
```

Definition at line 152 of file rsstats-opts.h.

6.51.1.24 REPORTS_SAMPLE

```
#define REPORTS_SAMPLE 0x1UL
```

Definition at line 149 of file rsstats-opts.h.

6.51.1.25 RESTART_OPT

```
#define RESTART_OPT(
                n )
```

Value:

```
                STMTS( \
                rsstatsOptions.curOptIdx = (n); \
                rsstatsOptions.pzCurOpt  = NULL )
```

Definition at line 174 of file rsstats-opts.h.

6.51.1.26 RSSTATS_FULL_VERSION

```
#define RSSTATS_FULL_VERSION "rsstats 0.0.1"
```

Full rsstats version text.

Definition at line 92 of file rsstats-opts.h.

6.51.1.27 RSSTATS_VERSION

```
#define RSSTATS_VERSION "0.0.1"
```

rsstats version

Definition at line 90 of file rsstats-opts.h.

6.51.1.28 SET_OPT_SAVE_OPTS

```
#define SET_OPT_SAVE_OPTS(
                a )
```

Value:

```
        STMTS( \
        DESC(SAVE_OPTS).fOptState &= OPTST_PERSISTENT_MASK; \
        DESC(SAVE_OPTS).fOptState |= OPTST_SET; \
        DESC(SAVE_OPTS).optArg.argString = (char const*)(a))
```

Definition at line 165 of file rsstats-opts.h.

6.51.1.29 STACKCT_OPT

```
#define STACKCT_OPT(
              n ) (((tArgList*)(DESC(n).optCookie))->useCt)
```

number of stacked option arguments.

Valid only for stacked option arguments.

Definition at line 119 of file rsstats-opts.h.

6.51.1.30 STACKLST_OPT

```
#define STACKLST_OPT(
              n ) (((tArgList*)(DESC(n).optCookie))->apzArgs)
```

stacked argument vector.

Valid only for stacked option arguments.

Definition at line 122 of file rsstats-opts.h.

6.51.1.31 START_OPT

```
#define START_OPT RESTART_OPT(1)
```

Definition at line 177 of file rsstats-opts.h.

6.51.1.32 STATE_OPT

```
#define STATE_OPT(
              n ) (DESC(n).fOptState & OPTST_SET_MASK)
```

Mask the option state revealing how an option was specified.

It will be one and only one of *OPTST_SET*, *OPTST_PRESET*, *OPTST_DEFINED*, *OPTST_RESET* or zero.

Definition at line 108 of file rsstats-opts.h.

6.51.1.33 USAGE

```
#define USAGE(
              c ) (*rsstatsOptions.pUsageProc)(&rsstatsOptions, c)
```

Definition at line 178 of file rsstats-opts.h.

6.51.1.34 VALUE_OPT_CLUSTERS

```
#define VALUE_OPT_CLUSTERS 'c'
```

Definition at line 146 of file rsstats-opts.h.

6.51.1.35 VALUE_OPT_HELP

```
#define VALUE_OPT_HELP 'h'
```

option flag (value) for help-value option

Definition at line 156 of file rsstats-opts.h.

6.51.1.36 VALUE_OPT_INPUT

```
#define VALUE_OPT_INPUT 'i'
```

Interface defines for specific options.

Definition at line 144 of file rsstats-opts.h.

6.51.1.37 VALUE_OPT_LOAD_OPTS

```
#define VALUE_OPT_LOAD_OPTS '<'
```

option flag (value) for load-opts-value option

Definition at line 164 of file rsstats-opts.h.

6.51.1.38 VALUE_OPT_MORE_HELP

```
#define VALUE_OPT_MORE_HELP 'H'
```

option flag (value) for more-help-value option

Definition at line 158 of file rsstats-opts.h.

6.51.1.39 VALUE_OPT_OUTPUT

```
#define VALUE_OPT_OUTPUT 'o'
```

Definition at line 145 of file rsstats-opts.h.

6.51.1.40 VALUE_OPT_REPORTS

```
#define VALUE_OPT_REPORTS 'r'
```

Definition at line 147 of file rsstats-opts.h.

6.51.1.41 VALUE_OPT_SAVE_OPTS

```
#define VALUE_OPT_SAVE_OPTS '>'
```

option flag (value) for save-opts-value option

Definition at line 162 of file rsstats-opts.h.

6.51.1.42 VALUE_OPT_VERSION

```
#define VALUE_OPT_VERSION 'v'
```

option flag (value) for version-value option

Definition at line 160 of file rsstats-opts.h.

6.51.2 Enumeration Type Documentation

6.51.2.1 rsstats_exit_code_t

```
enum rsstats_exit_code_t
```

Enumeration of rsstats exit codes.

Enumerator

RSSTATS_EXIT_SUCCESS	
RSSTATS_EXIT_FAILURE	
RSSTATS_EXIT_USAGE_ERROR	
RSSTATS_EXIT_NO_CONFIG_INPUT	
RSSTATS_EXIT_LIBOPTS_FAILURE	

Definition at line 133 of file rsstats-opts.h.

6.51.2.2 teOptIndex

`enum teOptIndex`

Enumeration of each option type for rsstats.

Enumerator

INDEX_OPT_INPUT	
INDEX_OPT_OUTPUT	
INDEX_OPT_CLUSTERS	
INDEX_OPT_REPORTS	
INDEX_OPT_VERSION	
INDEX_OPT_HELP	
INDEX_OPT_MORE_HELP	
INDEX_OPT_SAVE_OPTS	
INDEX_OPT_LOAD_OPTS	

Definition at line 76 of file rsstats-opts.h.

6.51.3 Variable Documentation

6.51.3.1 rsstatsOptions

`tOptions rsstatsOptions [extern]`

The option definitions for rsstats.

The one structure that binds them all.

Definition at line 533 of file rsstats-opts.c.

6.52 rsstats-opts.h

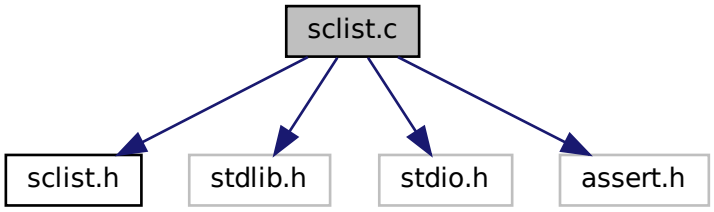
6.53 sclist.c File Reference

Basic single chained generic list.

```
#include "sclist.h"
#include <stdlib.h>
#include <stdio.h>
#include <assert.h>
```

Include dependency graph for sclist.c:



Classes

- struct sclistrecord_s

  Private list record structure.
- struct sclist_s

  Opaque sclist structure.

Typedefs

- typedef struct sclistrecord_s sclistrecord_t

  Private list record structure.
- typedef struct sclist_s sclist_t

  Opaque sclist structure.

Functions

- sclist_t * sclist_new ()
  Allocate and initialize the internal list structure.
- void sclist_del (sclist_t *sclist)
  Free all the list structure but not the values.
- sclistrecord_t * sclist_addrecord (sclist_t *sclist, void *value)
  Add a value at the end of the list.
- sclist_t * sclist_remrecord (sclist_t *sclist, sclistrecord_t *record)
  Remove a record in a list.
- sclistrecord_t * sclist_firstrecord (const sclist_t *sclist)
  Returns the pointer on the first list record.
- sclistrecord_t * sclist_nextrecord (const sclistrecord_t *record)
  Returns the pointer on the record following the specified one.
- void * sclist_getvalue (sclistrecord_t *record)
  Returns the value pointer stored in the record.

6.53.1 Detailed Description

Basic single chained generic list.

Author

François Cerbelle (Fanfan), francois@cerbelle.net

Definition in file sclist.c.

6.53.2 Typedef Documentation

6.53.2.1 sclist_t

```
typedef struct sclist_s sclist_t
```

Opaque sclist structure.

6.53.2.2 sclistrecord_t

```
typedef struct sclistrecord_s sclistrecord_t
```

Private list record structure.

6.53.3 Function Documentation

6.53.3.1 sclist_addrecord()

```
sclistrecord_t * sclist_addrecord (
            sclist_t * sclist,
            void * value )
```

Add a value at the end of the list.

Parameters

sclist	The list structure to add the value to (NULL not supported)
value	A pointer on the value to add.

Returns

A pointer on the list record

Fails and abort the program execution in case of out of memory.

Definition at line 66 of file sclist.c.

6.53.3.2 sclist_del()

```
void sclist_del (
            sclist_t * sclist )
```

Free all the list structure but not the values.

Parameters

sclist	List structure (NULL not supported)

Free all the list structures, but DO NOT free the referenced values.

Definition at line 55 of file sclist.c.

6.53.3.3 sclist_firstrecord()

```
sclistrecord_t * sclist_firstrecord (
            const sclist_t * sclist )
```

Returns the pointer on the first list record.

Parameters

sclist	List structure (NULL not supported)

Returns

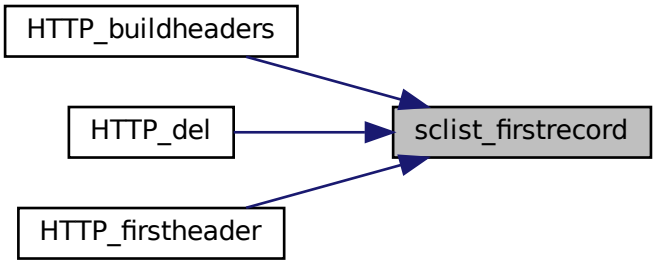
The pointer on the first record in the list

Return values

NULL	The list is empty
!NULL	The pointer on the value record

Definition at line 120 of file sclist.c.

Here is the caller graph for this function:



6.53.3.4 sclist_getvalue()

```
void * sclist_getvalue (
            sclistrecord_t * record )
```

Returns the value pointer stored in the record.

Parameters

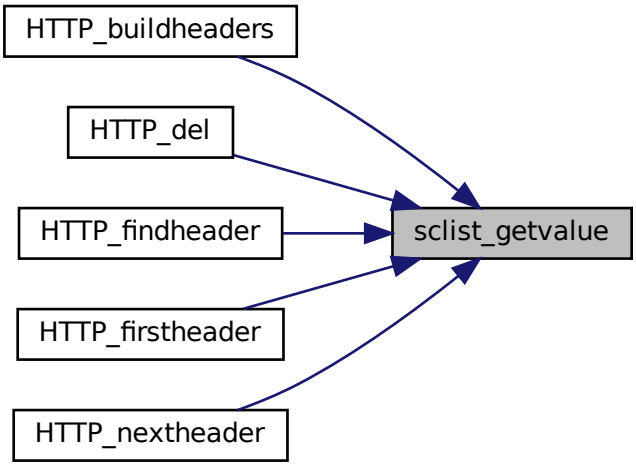
record	Pointer on the record to get the value from (NULL not supported)

Returns

Pointer on the value

Definition at line 132 of file sclist.c.

Here is the caller graph for this function:



6.53.3.5 sclist_new()

```
sclist_t * sclist_new ( )
```

Allocate and initialize the internal list structure.

Returns

Initialized list

Fails and abort the program execution in case of out of memory.

Definition at line 43 of file sclist.c.

Here is the caller graph for this function:

6.53.3.6 sclist_nextrecord()

```
sclistrecord_t * sclist_nextrecord (
            const sclistrecord_t * record )
```

Returns the pointer on the record following the specified one.

Parameters

record	Pointer on the current record (NULL not supported)

Returns

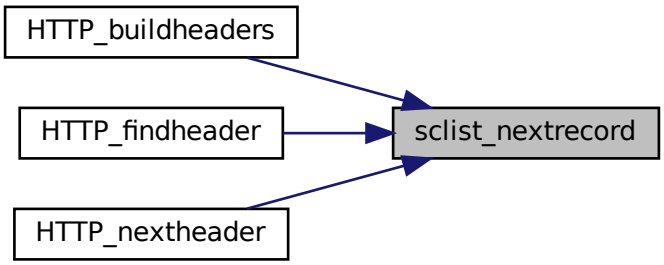
The pointer on the next record if it exists

Return values

NULL	No next value found (end of list)
!NULL	The pointer on the value record

Definition at line 126 of file sclist.c.

Here is the caller graph for this function:



6.53.3.7 sclist_remrecord()

```
sclist_t * sclist_remrecord (
            sclist_t * sclist,
            sclistrecord_t * record )
```

Remove a record in a list.

Parameters

sclist	The list to remove the value from (NULL not supported)
record	A pointer on the record to remove (NULL not supported)

Returns

A pointer to the sclist

Return values

NULL	if the record was not found
!NULL	if the record was successfully deleted from the sclist

Definition at line 94 of file sclist.c.

Here is the caller graph for this function:

6.54 sclist.c

  Returns the value pointer stored in the record.

6.55.1 Detailed Description

Basic single chained generic list.

Author

François Cerbelle (Fanfan), francois@cerbelle.net

Definition in file sclist.h.

6.55.2 Typedef Documentation

6.55.2.1 sclist_t

```
typedef struct sclist_s sclist_t
```

Opaque list type.

Definition at line 24 of file sclist.h.

6.55.2.2 sclistrecord_t

```
typedef struct sclistrecord_s sclistrecord_t
```

Opaque list record type.

Definition at line 28 of file sclist.h.

6.55.3 Function Documentation

6.55.3.1 sclist_addrecord()

```
sclistrecord_t * sclist_addrecord (
            sclist_t * sclist,
            void * value )
```

Add a value at the end of the list.

Parameters

sclist	The list structure to add the value to (NULL not supported)
value	A pointer on the value to add.

Returns

A pointer on the list record

Fails and abort the program execution in case of out of memory.

Definition at line 66 of file sclist.c.

6.55.3.2 sclist_del()

```
void sclist_del (
            sclist_t * sclist )
```

Free all the list structure but not the values.

Parameters

sclist	List structure (NULL not supported)

Free all the list structures, but DO NOT free the referenced values.

Definition at line 55 of file sclist.c.

6.55.3.3 sclist_firstrecord()

```
sclistrecord_t * sclist_firstrecord (
            const sclist_t * sclist )
```

Returns the pointer on the first list record.

Parameters

sclist	List structure (NULL not supported)

Returns

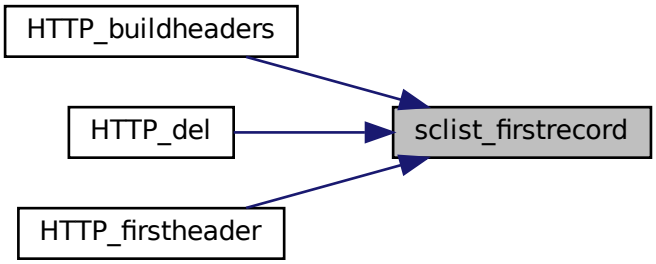
The pointer on the first record in the list

Return values

NULL	The list is empty
!NULL	The pointer on the value record

Definition at line 120 of file sclist.c.

Here is the caller graph for this function:



6.55.3.4 sclist_getvalue()

```
void * sclist_getvalue (
            sclistrecord_t * record )
```

Returns the value pointer stored in the record.

Parameters

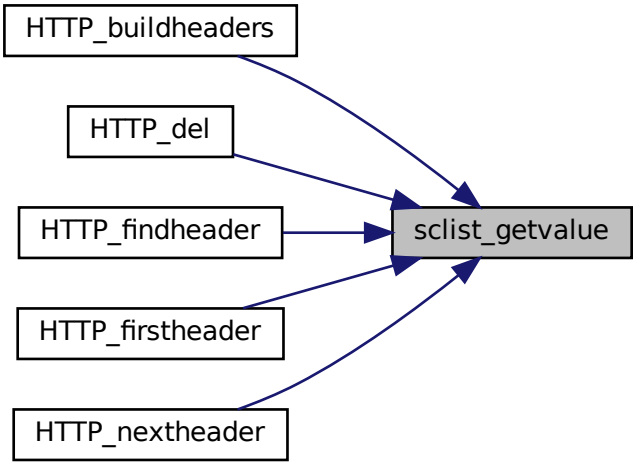
record	Pointer on the record to get the value from (NULL not supported)

Returns

Pointer on the value

Definition at line 132 of file sclist.c.

Here is the caller graph for this function:



6.55.3.5 sclist_new()

```
sclist_t * sclist_new ( )
```

Allocate and initialize the internal list structure.

Returns

Initialized list

Fails and abort the program execution in case of out of memory.

Definition at line 43 of file sclist.c.

Here is the caller graph for this function:

6.55.3.6 sclist_nextrecord()

```
sclistrecord_t * sclist_nextrecord (
            const sclistrecord_t * record )
```

Returns the pointer on the record following the specified one.

Parameters

record	Pointer on the current record (NULL not supported)

Returns

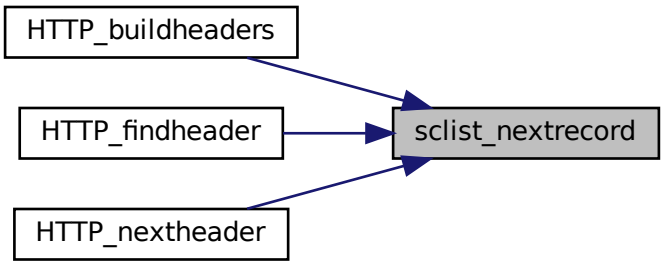
The pointer on the next record if it exists

Return values

NULL	No next value found (end of list)
!NULL	The pointer on the value record

Definition at line 126 of file sclist.c.

Here is the caller graph for this function:



6.55.3.7 sclist_remrecord()

```
sclist_t * sclist_remrecord (
            sclist_t * sclist,
            sclistrecord_t * record )
```

Remove a record in a list.

Parameters

sclist	The list to remove the value from (NULL not supported)
record	A pointer on the record to remove (NULL not supported)

Returns

A pointer to the sclist

Return values

NULL	if the record was not found
!NULL	if the record was successfully deleted from the sclist

Definition at line 94 of file sclist.c.

Here is the caller graph for this function:
